

## Yeast Carbon Base

M141

Yeast Carbon Base is recommended for use in the classification of yeasts on the basis of their ability to assimilate nitrogen compounds.

### Composition\*\*

Ingredients	Gms / Litre
Dextrose	10.000
L-Histidine hydrochloride	0.001
DL-Methionine	0.002
DL-Tryptophan	0.002
Biotin	0.000002
Calcium pantothenate	0.0004
Folic acid	0.000002
Inositol	0.002
Niacin	0.0004
p-Amino benzoic acid (PABA)	0.0002
Pyridoxine hydrochloride	0.0004
Riboflavin (Vitamin B2)	0.0002
Thiamine hydrochloride	0.0004
Boric acid	0.0005
Copper sulphate	0.00004
Potassium iodide	0.0001
Ferric chloride	0.0002
Manganese sulphate	0.0004
Sodium molybdate	0.0002
Zinc sulphate	0.0004
Monopotassium phosphate	1.000
Magnesium sulphate	0.500
Sodium chloride	0.100
Calcium chloride	0.100
Final pH ( at 25°C)	5.5±0.2

\*\*Formula adjusted, standardized to suit performance parameters

### Directions

A) For Nitrogen Assimilation test, prepare the broth base in 10X concentration. Dissolve 11.71 grams in 100 ml distilled water. Add sterile nitrogen source as desired to it. Warm if necessary to dissolve the medium completely. Sterilize by filtration.

B) For detection of yeasts, other than *Saccharomyces cerevisiae*, dissolve 2.35 grams of Yeast Carbon Base in 100 ml distilled water.

C) For detection and enumeration of wild yeasts in beer and other brewing materials add 0.33 grams of Ammonium sulphate and 4 grams of agar to Base prepared as per B. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes.

### Principle And Interpretation

Yeasts are unicellular fungi. They are easily differentiated from most bacteria because of their relatively larger size and morphological features. Yeasts are used for synthesizing certain fats, vitamins and proteins from simple sugars and ammonium nitrogen. They are also known to cause plant and animal diseases, spoil food and bring about deterioration of textiles and other materials (1). Yeast Carbon Base, developed by Wickerham (2-5), is used for the classification of yeasts on the basis of their ability to assimilate various nitrogen compounds. The nitrogen assimilation ability is tested by adding various nitrogen sources such as ammonium sulphate (1 gm), urea (0.46 gm), potassium nitrate (0.78 gm), asparagine (1 gm), peptone (gelatin 1.32 gm).

Yeast Carbon Base is composed of a defined set of nutrients including carbon source, amino acids, vitamins and minerals required for the growth of yeasts. The inclusion of vitamins in this base was found necessary by Wickerham as an aid for utilization of nitrogen compounds by certain yeasts as they cannot assimilate these compounds in the absence of vitamins.

## Quality Control

### Appearance

White to cream homogeneous free flowing powder

### Colour and Clarity of prepared medium

colourless clear solution without any precipitate.

### Reaction

Reaction of 1.17% w/v aqueous solution at 25°C. pH : 5.5±0.2

### pH

5.30-5.70

### Cultural Response

M141: Cultural characteristics observed after an incubation at 25-30°C for 6-7 days or longer if required

Organism	Inoculum (CFU)	Growth (Plain)	Growth (with Ammonium sulphate)
<i>Saccharomyces cerevisiae</i> ATCC 9763	50-100	none-poor	good
<i>Saccharomyces uvarum</i> ATCC 28098	50-100	none-poor	good

## Storage and Shelf Life

Store dehydrated powder and prepared medium at 2-8°C in tightly closed container. Use before expiry period on the label.
