

# **Technical Data**

Eugonic Broth M429

Eugonic broth is recommended for the cultivation of fastidious microorganisms like *Haemophilus, Nesseria, Pasteurella, Brucella* and *Lactobacillus* species.

## Composition\*\*

Ingredients	Gms / Litre
Casein enzymic hydrolysate	15.000
Papaic digest of soyabean meal	5.000
Dextrose	5.000
Sodium chloride	4.000
Sodium sulphite	0.200
L-Cystine	0.200
Final pH ( at 25°C)	$7.0\pm0.2$

<sup>\*\*</sup>Formula adjusted, standardized to suit performance parameters

#### **Directions**

Suspend 29.4 grams in 1000 ml distilled water. Heat if necessary with frequent stirring to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. Cool to 40-45°C and add 5 -10% v/v sterile defibrinated blood if desired. The blood may be chocolated by heating.

## **Principle And Interpretation**

Eugonic Broth was developed by Pelczar and Vera (1) for cultivation of fastidious organisms like *Brucella*. This medium can also be used to grow *Mycobacteria* and various pathogenic fungi including *Nocardia, Histoplasma* and *Blastomyces*, when enriched with blood. Niven used this media for detection of spoilage of meats (2). Eugonic Broth was developed to obtain eugonic (luxuriant) growth of fastidious microorganisms like *Brucella* which are otherwise difficult to cultivate (5). The unenriched medium supports rapid growth of lactobacilli associated with cured meat products, dairy products and other foods. APHA recommends Eugonic Broth, which is also used in germinating anaerobic spores pasteurized at 104°C (3, 4). Organisms like *Bordetella* and *Neisseria* proliferate in Eugonic Broth because large amount of sulfur and carbon sources have been added in the formulation. Therefore Eugonic Broth is recommended for the direct isolation of *Bordetella pertussis* and *Neisseria meningitides* from the test materials such as throat mucus, blood, cerebrospinal fluid, pleural fluid and other specimens. For the isolation of *Bacillus pumilus*, Eugonic Broth can be supplemented with 0.1% starch, prior to sterilization (5)

Casein enzymic hydrolysate and papaic digest of soyabean meal provide the nitrogen, vitamins and amino acids, which supports the growth of fastidious microbial species. The high concentration of dextrose is the energy source for rapid growth of bacteria. L-Cystine and sodium sulphite are added to stimulate growth. Sodium chloride maintains the osmotic balance of the media. The high carbohydrate content along with high sulfur (cystine) content improves growth with chromogenicity (4).

### **Quality Control**

#### **Appearance**

Cream to yellow homogeneous free flowing powder

#### Colour and Clarity of prepared medium

Yellow coloured, clear solution in tubes

#### Reaction

Reaction of 2.94% w/v aqueous solution at 25°C. pH: 7.0±0.2

#### pН

6.80-7.20

#### **Cultural Response**

HiMedia Laboratories Technical Data

M429: Cultural characteristics observed with added 5-10% v/v sterile defibrinated blood after an incubation at 35-37°C for 48 hours (fungal cultures incubated at 25-30°C).

Organism	Inoculum (CFU)	Growth
Bacillus pumilus ATCC 14884	50-100	good (with 0.1% starch)
Brucella abortus ATCC 431	550-100	good (under 3-5% CO2)
Candida albicans ATCC 26790	50-100	good
Lactobacillus fermentum ATCC 9338	50-100	good
Neisseria meningitidis ATC 13090	C50-100	good
Streptococcus pneumoniae ATCC 6303	50-100	luxuriant(under 3-5% CO2)
Streptococcus pyogenes ATCC 19615	50-100	luxuriant(under 3-5% CO2)

## **Storage and Shelf Life**

Store below 30°C in tightly closed container and the prepared medium at 2 - 8°C. Use before expiry date on the label.
